ANALYST REQUEST
>_ which device is bound to ACCT-4cd0?

LOG STORE
19,838 tokens
6 entries per line

THE CONFLICT
redact: no handle
compress: value sent

CLOUD READER
receives (q-prime, P)
returns one answer

THE EXAMPLE

```
ACCT-4cd0
media_player
temp 21.4
status active
```

one record holds both
the value to hide is also the anchor that locates the answer

TWO WAYS TO FAIL

redact
handle lost
the reader cannot tell which record is meant

compress
value exposed
the handle arrives together with the value

each keeps one and loses the other

DARK

0.4937
F1 at 50% budget

0.4831
strongest compressor
difference not significant

MEASURED LEAKAGE

0% vs 98.1% for that compressor

REFERENT

retained, not deleted
the record stays, the value inside it is replaced

2,728 cases | 6 corpora | 50% token budget | no answer key | no training

boundary: the gain tracks the record layout, and Section VIII measures where it stops
